AMENDMENTS TO THE CLAIMS

Please amend claims 1, 7, 11, and 16, and add claims 20-27, as follows:

1. (Currently amended) A method for tracking phone calls, comprising:

detecting completion of a call;

responsively presenting a user of a client station with (i) information about the call and

(ii) a prompt requesting the user to categorize the call;

receiving from the user, in response to the prompt, a categorization of the call; and

transmitting from the client station to a network server, via a radio access network, a

record of the call and the categorization of the call, wherein the record of the call and the

categorization of the call are transmitted via an HTTP POST message.

2. (Original) The method of claim 1, wherein the information about the call

comprises call-duration information and call-participant information.

3. (Original) The method of claim 1, wherein the prompt requesting the user to

categorize the call requests the user to categorize the call as a business or personal call.

4. (Original) The method of claim 1, wherein the categorization is selected from the

group consisting of business and personal.

McDonnell Boehnen Hulbert & Berghoff LLP 300 South Wacker Drive Chicago, IL 60606

Telephone: (312) 913-0001

(Original) The method of claim 1, wherein the record of the call includes the

categorization of the call.

6. (Original) The method of claim 1, wherein transmitting from the client station to a

network server, via a radio access network, a record of the call and the categorization of the call

comprises:

upon completion of the call, automatically transmitting from the client station to the

network server, via the radio access network, the record of the call including a record ID; and

after transmitting one or more records of calls including the record ID of each call,

transmitting from the client station to the network server, via the radio access network, the record

ID and the categorization of the call.

7. (Currently amended) A client station comprising:

a wireless communication interface;

a display;

a user-input mechanism; and

program logic executable, in response to completion of a call, (i) to present on the display

information about the call and a prompt requesting a user to categorize the call, (ii) to then

receive via the user-input mechanism a categorization of the call, and (iii) to thereafter send to a

network server, via the wireless communication interface, a record of the call and the

3

McDonnell Boehnen Hulbert & Berghoff LLP 300 South Wacker Drive Chicago, IL 60606

categorization of the call, wherein the record of the call and the categorization of the call are sent

via an HTTP POST message.

8. (Original) The client station of claim 7, wherein the information about the call

comprises call-duration information and call-participant information.

9. (Original) The client station of claim 7, wherein the prompt requesting the user to

categorize the call requests the user to categorize the call as a business or personal call.

10. (Original) The client station of claim 7, wherein the categorization is selected

from the group consisting of business and personal.

11. (Currently amended) A system comprising:

a client station; and

a network server coupled to the client station;

wherein the client station comprises a wireless communication interface, a display, a

user-input mechanism, and program logic executable, in response to completion of a call, (i) to

present on the display information about the call and a prompt requesting a user to categorize the

call, (ii) to then receive via the user-input mechanism a categorization of the call, and (iii) to

thereafter send to the network server, via the wireless communication interface, a record of the

call and the categorization of the call, wherein the record of the call and the categorization of the

call are sent via an HTTP POST message; and

McDonnell Boehnen Hulbert & Berghoff LLP 300 South Wacker Drive

Chicago, IL 60606

Telephone: (312) 913-0001

wherein the network server comprises program logic executable to store the record of the

call and the categorization of the call.

12. (Original) The system of claim 11, wherein the information about the call

comprises call-duration information and call-participant information.

13. (Original) The system of claim 11, wherein the prompt requesting the user to

categorize the call requests the user to categorize the call as a business or personal call.

14. (Original) The system of claim 11, wherein the categorization is selected from the

group consisting of business and personal.

15. (Original) The system of claim 11, further comprising a second client station, the

second client station comprising a display and program logic executable to present on the display

one or more records of calls including the categorization of each call.

16. (Currently amended) A system comprising:

a first client station and a second client station; and

a network server coupled to the first and second client stations;

wherein the first client station comprises a wireless communication interface, a display, a

user-input mechanism, and program logic executable, in response to completion of a call, (i) to

McDonnell Boehnen Hulbert & Berghoff LLP 300 South Wacker Drive

Chicago, IL 60606

Telephone: (312) 913-0001

present on the display information about the call and a prompt requesting a user to categorize the

call, (ii) to then receive via the user-input mechanism a categorization of the call, and (iii) to

thereafter send to the network server, via the wireless communication interface, a record of the

call and the categorization of the call, wherein the record of the call and the categorization of the

call are sent via an HTTP POST message;

wherein the network server comprises program logic executable to store the record of the

call and the categorization of the call; and

wherein the second client station comprises a display and program logic executable to

present on the display one or more records of calls and the categorization of each call.

17. (Original) The system of claim 16, wherein the information about the call

comprises call-duration information and call-participant information.

18. (Original) The system of claim 16, wherein the prompt requesting the user to

categorize the call requests the user to categorize the call as a business or personal call.

19. (Original) The system of claim 16, wherein the categorization is selected from the

group consisting of business and personal.

20. (New) The method of claim 1, wherein the network server stores the record of the

call and the categorization of the call, further comprising:

McDonnell Boehnen Hulbert & Berghoff LLP 300 South Wacker Drive

Chicago, IL 60606

Telephone: (312) 913-0001

requesting from the network server a stored record of the call and a stored categorization

of the call;

receiving at the client station the stored record of the call and the stored categorization of

the call; and

displaying the stored record of the call and the stored categorization of the call received

from the network server on the client station.

21. (New) The method of claim 20, wherein requesting from the network server the

stored record of the call and the stored categorization of the call further comprises requesting

from the network server the stored record of the call and the stored categorization of the call via

an HTTP GET request.

22. (New) The client station of claim 7, wherein the network server stores the record

of the call and the categorization of the call, the client station further comprising program logic

executable to (1) request from the network server a stored record of the call and a stored

categorization of the call, (2) receive at the client station the stored record of the call and the

stored categorization of the call, and (3) display the stored record of the call and the stored

categorization of the call received from the network server on the client station.

23. (New) The client station of claim 22, further comprising program logic executable

to request from the network server the stored record of the call and the stored categorization of

the call via an HTTP GET request.

McDonnell Boehnen Hulbert & Berghoff LLP 300 South Wacker Drive

Chicago, IL 60606

Telephone: (312) 913-0001

24. (New) The system of claim 11, wherein the client station further comprises

program logic executable to (1) request from the network server a stored record of the call and a

stored categorization of the call, (2) receive at the client station the stored record of the call and

the stored categorization of the call, and (3) display the stored record of the call and the stored

categorization of the call received from the network server on the client station.

(New) The system of claim 24, wherein the client station further comprises 25.

program logic executable to request from the network server the stored record of the call and the

stored categorization of the call via an HTTP GET request.

26. (New) The system of claim 16, wherein the first client station further comprises

program logic executable to (1) request from the network server a stored record of the call and a

stored categorization of the call, (2) receive at the first client station the stored record of the call

and the stored categorization of the call, and (3) display the stored record of the call and the

stored categorization of the call received from the network server on the first client station.

27. (New) The system of claim 26, wherein the first client station further comprises

program logic executable to request from the network server the stored record of the call and the

8

stored categorization of the call via an HTTP GET request.
